OUR FULL RANGE OF PRODUCTS
For quick access use the colour code below

- WINDOW SILLS / LINTELS
- PADSTONES / WALL & PIER COPING
- CHIMNEY CAPS / CHIMNEY SYSTEMS
- MARKER POSTS, SLABS & PLATES
- JUNCTION BOXES
- GULLYS & LIDS RANGE
- DUCT CHANNELS & LIDS
- KERBS RANGE
- HIGH CONTAINMENT KERBS
- MULTI V SYSTEM
- PRE-FABRICATED DRAINAGE SYSTEMS
- STORMDRAIN SYSTEMS
- GRASS & GRAVEL REINFORCEMENT
- CHANNELS & GRATINGS
- BICYCLE STANDS / SHELTERS
- STAINLESS STEEL BOLLARDS
- BOLLARDS / PLANTERS
- BENCHES
- STREET FURNITURE
- PAVING / TACTILE FLAGS / STUDS / BARS
- STONE WRAP / CLADDING
- FENCING / WATER TROUGHES

### WINDOW SILLS

KILLESHLA’S WINDOW SILLS INSTALLATION DETAILS

- Thermal insulation is necessary around window opening between elements to eliminate the risk of condensation and heat loss.
- Dampproof courses should be provided to the bottom, back and ends of sills. That is a key element in construction to close cavity wall. Also sill must overhand wall beneath to allow water to drip off.
- The up stand part of a sill should insofar as possible stick to specific location as an internal blockwork or corner block in natural stone elevation.
- After dampproof courses provide insulation and concrete backing to protect from heat loss.

Sills are required for cavity wall construction and fire resistance

KILLESHLA’S WINDOW SILLS ARE AVAILABLE IN PRECAST CONCRETE, RECONSTITUTED STONE AND NATURAL STONE SILL

**TYPE F WINDOW SILL**

This window sill was developed as a slimmer alternative to the "A" Sill. The 75 mm face is more acceptable to some clients. The sill normally overhangs the outer leaf by 50 to 75-mm and rests 35 to 60-mm on the inner leaf.

- 310 x 140 x 75mm
  - To suit String Course Ref: SC/162
  - * Stock sizes see page 6

![Diagram of Type F Window Sill](image)

**TYPE G WINDOW SILL**

This window sill is popular in 215 mm cavity block wall construction where the client wants to see more than the standard size window sill face. The size of the sill allows a certain amount of concrete to be placed behind the sill during construction. The sill normally overhangs the blockwork by 50 to 75-mm.

- 210 x 115 x 60mm
  - * Stock sizes see page 6

![Diagram of Type G Window Sill](image)

**TYPE H WINDOW SILL**

This is our heavier timber-frame window sill. (See Type D). The sill normally overhangs the outer leaf by 75-mm and hangs over the cavity by 50 mm. This ensures that it does not contact the timber-frame. Also suitable for traditional build.

- 225 x 140 x 100mm
  - To suit String Course Ref: SC/109
  - * Stock sizes see page 6

Photographs, drawings, sizes and reference numbers are given as an indication only and can be changed without notice. Killeshal Precast Concrete Ltd reserves the right to modify product specification without notice.
**TYPE J WINDOW SILL**

This window sill was developed to enable us to supply the growing number of buildings using natural stone cladding on the outside. The sill can be used with a 215 outer leaf contraction. The sill positions the window 210 mm from the outside face of the masonry. The sill normally overhangs the outer leaf by 50 to 75-mm.

- **400 x 140 x 100mm**
  - * Stock sizes see page 6

Ref: S/306 ***

---

**TYPE K WINDOW SILL**

This window sill is ideal where the client wishes to emphasise the window sill. The height of the window sill ensures it’s visibility at a distance. The sill normally overhangs the outer leaf by 50 to 75-mm and rests 25 to 50-mm on the inner leaf. The sill is ideal to prevent people sitting on them.

- **300 x 215 x 100mm**
  - * Stock sizes see page 6

Ref: S/102

---

**TYPE L WINDOW SILL**

This window sill was developed to enable us to supply the growing number of buildings using natural stone cladding on the outside. The sill can be used with a 300 outer leaf contraction. The sill positions the window 300 mm from the outside face of the masonry. The sill normally overhangs the outer leaf by 50 to 75-mm.

- **365 x 115 x 55mm**
  - * Stock sizes see page 6

Ref: S/129

**TYPE M WINDOW SILL**

This window sill was developed to enable us to supply the growing number of buildings using natural stone cladding on the outside. The sill can be used with a 300 outer leaf construction. The sill positions the window 300 mm from the outside face of the masonry. The sill normally overhangs the outer leaf by 50 to 75-mm.

- 490 x 140 x 100mm*
  * Stock sizes see page 6

**TYPE N STONEWRAP WINDOW SILL**

This window sill was developed to enable us to supply the growing number of buildings using Stonewrap cladding on the outside. The sill can be used in both traditional and timber frame construction. The sill positions the window behind the external leaf of blockwork. The sill normally overhangs the Stonewrap cladding by 75-mm.

- 265 x 140 x 100*  
  * Stock sizes see page 6

**THE A STOOLED WINDOW SILL**

Typically used with a 100mm outer leaf, various cavities and 215mm inner leaf. The sill normally overhangs the outer leaf by 75mm and rests 50mm of 215 inner leaf. Stools each side support brickwork and determents one size.

- 325 x 140 x 100mm*  
  * To suit String Course Ref: SC/109  
  * Stock sizes see page 6

**TYPE F STOOLED WINDOW SILL**

This window sill was developed as a slimmer alternative to the "A" Sill. It's 75 mm face is more acceptable to some clients. The sill normally overhangs the outer leaf by 75-mm and rests 15mm on the inner leaf using this construction. Stools each end support brickwork and determine ope sizes.

- 290 x 140 x 75mm
  - To suit String Course Ref: SC/182
  - *Stock sizes see page 6

**TYPE H STOOLED WINDOW SILL**

This is our heavier timber-frame window sill. (See Type D). The sill normally overhangs the outer leaf by 75-mm. This ensures that it does not contact the timber-frame. Also suitable for traditional build. Stools each end support brickwork and determine ope sizes.

- 225 x 140 x 100mm
  - To suit String Course Ref: SC/109
  - *Stock sizes see page 6

**STRING COURSE / BAND COURSE**

String Course is a continuous narrow horizontal course or moulding which projects slightly from the surface of a wall and can be an appropriate decorative accompaniment to Killeshal window sills or used on their own.

**STRING/BAND COURSE AVAILABLE IN PRECAST CONCRETE, RECONSTITUTED STONE AND NATURAL STONE**

**PROJECTION TO MATCH SILLS TYPE:**

- STANDARD 10 ½” (Ref: S/385) - Ref: S/C 133
- A (Ref: S/399) - Ref: S/C 109

Killeshal Precast Concrete Ltd reserves the right to modify product specification without notice.
Killeshal have been working closely with IG Steel Lintels for a number of years now and have a dedicated value added engineering contact within IG. This means we can now offer a top class value added engineering service and ensure that the selection and specification of steel lintels and masonry support components for your building project will answer to your specific project requirements.

We offer a range of Steel Lintels to cover numerous applications (image below is a sample set)

STEEL LINTELS with Built-in Insulation for Better Thermal Efficiency

Our standard range of lintels are manufactured from high quality grade pre-galvanised mild steel to BS EN 10346:2009 DX51D plus Z600 or grade Z275 to BS EN10025-2:2004 with minimised spangle finish and a minimum yield stress of 250N/mm².

Keystone lintels are insulated with expanded CFC free polystyrene and conform to BS 13163: 2008.

These lintels have been subjected to a fire test (ref: WARRES No.101263) in accordance with standard BS 476: Part20: 1987, and achieved a one hour fire performance.
BRICK SLIP FEATURE LINTELS

As illustrated, the Brick Slip Feature Lintel joins seamlessly with the rest of the construction.

Our partner, Keystone, provides a technically advanced solution for an extensive range of brick slip installations. Produced off site as a one piece prefabricated unit, the patented Keystone system ensures maximum performance thanks to the unique adhesion process.

We use a consignment of the brick being used on site. This brick is then tailored to suit the client’s design and fixed to Keystone’s galvanised and powder coated structural steel elements.

Brick Slip Feature Steel Linetls are a one piece prefabricated unit, custom manufactured to order, to achieve even the most challenging of architectural designs.

MASONRY SUPPORTS

A range of systems suitable for supporting any outer leaf material: brickwork, fairface blockwork, rendered blockwork, cut and reconstituted stone. The systems can be fixed back to reinforced concrete cast-in channel and steel sections.

INDUSTRY LEADING ADJUSTABILITY
It has industry leading adjustability - this mitigates for on-site conditions in the most cost effective way possible.

REQUIRES 25% LESS BRACKETS
It has the strongest angle section on the market -this means that compared to our next best competitor, up to 25% fewer support brackets are required.

SUPPLIED EX-STOCK
All configurations are available ex-stock - this makes it easier to specify and cheaper to source.

SCOPE OF ADJUSTMENT

We can work with you to engineer solutions to your unique requirements and develop Custom Designs from Gothic Arch to Porthole and Bay Linetls in addition to the standard ranges.
The information contained in the brochure was up to date at the time of going to print. Photographs, drawings, sizes and reference numbers are given as an indication only and can be changed without notice. Killeshal Precast Concrete Ltd reserves the right to modify product specification without notice.
CONCRETE PADSTONES

Killeshal manufactures a range of Precast Concrete Padstones to match our extensive range of Lintels. These padstones are stronger than a conventional masonry block, made in 40N/Sq mm concrete mix.

Features and Advantages over In-Situ Casting:
- Simple to use – bed in place just like blocks
- Readily available – standard sizes ex-stock
- Reduced labour costs with no on-site casting
- Tough 40N/Sq mm concrete material
- Reduces risk of lintel load transfers crushing blockwork underneath
- Non-standard sizes / custom requirements can be catered for

![Padstones Diagram]

CHIMNEY SYSTEMS

In addition to our Chimney Flue Gatherings and Chimney Caps, KPC also supply complete Chimney Systems from leading brands, Anki and Schiedel.

Isokern from Anki with natural insulating properties of pumice

Schiedel Chimney System Modular 3-layer insulated chimney system

Design for speedy construction
Suitable for timber frame, steel frame and masonry construction
Modular units for easy assembly on site
Suitable for all fuels—gas, oil, wood and solid fuels
Superior insulation

Isokern products can be used for new chimneys and for refurbishing existing chimneys. The Isokern chimney systems provide a lightweight, easily installed and versatile chimney which can be used internally or externally. They are suitable for use with burning appliances in new and refurbished projects. They are ideal for Masonry, Timber Frame and Steel Frame construction. Isokern chimneys have been installed in Europe for over 60 years.

Schiedel is Europe’s largest supplier of chimney systems and is part of Lafarge Roofing. In keeping with the standards expected from such a prestigious pedigree, the group is certified to EN ISO 9001.

The Schiedel Swift is ideal for Open Fires, Stoves, Cookers and Central Heating Boilers.

MARKER POSTS AND SLABS

- Marker posts are placed at or behind location points for services such as AV/SV, hydrant chambers, water and gas chambers, electric cable junctions and field markers as markers for emergency services or service engineers.
- Buried hazard warning marker slabs which shadow electricity lines and gas pipes, helping to avoid breaches and health and safety incidents.

Concrete lids are available for all boxes. Cast iron lids are available on some boxes, where indicated. Contact our technical sales team for further information.

**JUNCTION BOX 3**
- 640 x 1110 x 800mm
- Hole Size: 150
- Reinforced walls
- Easily knockout polystyrene cable entry point / can be supplied with 12/no x 150mm dia. straight through entry points (4/no or 1. no side wall, 4/no on each cable end).
- Easily manoeuvred with lifting eyes.

Holes can be adjusted to suit requirements.
Cast iron lid available on this model.

**JUNCTION BOX 4**
- 640 x 1110 x 800mm
- Large Hole Size: 114
- Small Hole Size: 60
- Reinforced walls
- Easily manoeuvred with lifting eyes.

Holes can be adjusted to suit requirements.
Cast iron lid available on this model.

**ESB MINI PILLAR JUNCTION BOX 5**
- 960 x 1270 x 895mm
- Reinforced walls.
- ESB approved.
- 100mm shoulder to facilitate increasing the depth.
- Drainage Sump.
- Easily manoeuvred.
- Multiple cable entry points.
- Integrated, reinforced base.

Holes can be adjusted to suit requirements.
Cast iron lid available on this model.
Colour may vary, depending on application.

**BUS STOP KERBS**

Available in Concrete and Reconstituted Granite options

**Killeshal’s Bus Stop Kerb Design Features include:**
- Height fixed to suit easy access to modern buses.
- Curved profile to enable accurate bus positioning at the stop.
- Curved profile reduces lateral impact between wheel and Killeshal’s kerb, increasing the life span of bus wheel ad kerbs.
- Textured top face aids bus entry for the visually impaired.

HIGH CONTAINMENT KERBS (TRAFFIC MANAGEMENT KERBS)

Advantages of Killeshal’s High Containment Kerbs:

- Used in a wide array of traffic control applications.
- Killeshal’s Traffic Management is designed to re-direct vehicles in their objective course without extreme jolting or loss of control.
- As the aim is to redirect vehicles along their desired path, there is less risk of injury to drivers and passengers. This is achieved by the profile of the kerb. There is less likelihood of a sudden halt, which allows following traffic time to slow down or stop.
- Killeshal’s High Containment Kerb is designed to reduce damage by vehicles more successfully than typical impact obstacles.
- The purpose of the Killeshal’s High Containment Kerb is to redirect vehicles back onto their intended route and to reduce potential damage to vehicles.
- Prevent mounting onto pavements.
  - 420 x 375 x 914 mm
  - STANDARD LENGTHS:
    - 914 mm
    - 510 / 582 mm
    - 457 mm
    - 420 / 430 mm
    - 301 mm

Other sizes available on request

LAYING RECOMMENDATIONS

New Construction:

- Foundation to be 215mm thick (minimum).
- Construct foundation 625mm wide from carriageway edge.
- Haunching re-bar (350mm x 16mm dia.) at 425mm centers.
- Re-bar to be 160mm from outside edge of foundation and project 150mm vertically from concrete.
- Re-bar not required if there is haunching or backfill on top of the Traffic Management Kerbs.
- Traffic Management Kerbs should be laid at 20 to 70mm above road level.
- Bedding material - 1:3 cement and sand mortar.
- Backing concrete - C 7.5 concrete extended at least to 100mm from top edge of the kerbs.

Minimum compressive strength 40N/mm² at 28 days

Existing Carriageway:

- Remove kerbs or road edge.
- Foundation to be 215mm thick (minimum).
- Construct foundation 625mm wide from carriageway edge.
- Haunching re-bar (350mm x 16mm dia.) at 425mm centers.
- Re-bar to be 160mm from outside edge of foundation and project 150mm vertically from concrete.
- The concrete foundations should be scored to assist bonding with the mortar.
- Bedding and concrete specifications as opposite.

Photographs, drawings, sizes and reference numbers are given as an indication only and can be changed without notice. Killeshal Precast Concrete Ltd reserves the right to modify product specification without notice.

Our Traffic Management Kerb Quadrants and Corners are particularly suited for the construction of Traffic Roundabouts.
The information contained in the brochure was up to date at the time of going to print. Photographs, drawings, sizes and reference numbers are given as an indication only and can be changed without notice. Killeshal Precast Concrete Ltd reserves the right to modify product specification without notice.

TAPERS

To allow Killeshal’s High Containment Kerbs to return to the normal lower profile of the roadside kerb, a taper unit has been developed. Tapering the Traffic Management Kerb profile to normal roadside kerb is completed in two units. The High Containment Kerbs match to half batter and splayed roadside kerb.

- 250 x 125 x 914mm
- 340 x 250 x 914mm

Internal Radius

The table below shows the radii which can be accomplished using both standard and short lengths. The radii are obtained by adjusting the joint width. These radii would more often be used to form the outer boundaries of roundabouts.

Internal Radius

ULMA Linear Drainage Channel, type MULTIV+. R200G; External width 236 mm, internal width 200 mm, with overall heights between 60 and 370 mm; suitable for cascade-type slopes to collect rainwater; sections 1 LM in length optimized V-shape with self-cleaning effect; especially designed for channel runs with no longitudinal slope, galvanized steel edges for lateral protection; fast, boltless fastening system with 8 fastening points per LM.

TYPICAL CONSTRUCTION DETAILS

SD250

Surface finish to be above channel, see separate detail.
200mm Concrete Slab Thickness
A193 Flanged Head Fitting with 50mm cover from Stormdrain
Inlet unit to structural engineers specifications
Hardcore Base
Minimum 200mm Concrete bed & surround, (minimum grade C35)

All dimensions are for guidance purposes only. We operate a policy of continuous product development and reserve the right to modify products and specifications where appropriate.

For details on the requirements for larger sizes and higher loadings please contact Killeshal’s sales team on +353 (0)57 9353018.

STORMDRAIN ACCESSORIES

SILTPIT / MANHOLE UNIT
These universal units can be used as either a siltpit outlet or as a mid-run siltpit. All the channel entry holes are pre-cut in the factory, with a manhole adaptor added to the end of the channel, to ensure easy and accurate installation of the STORMDRAIN.

They are designed to take a D400 cover and frame which can be supplied separately.

ACCESS PORTS
These are available in all the STORMDRAIN channel sizes.

They are manufactured as either midrun access ports or end access ports with end caps included.

The inclusion of a factory cut transition plate turns an access port into a transition unit. D400 cover and frame to suit are available separately.

The information contained in the brochure was up to date at the time of going to print. Photographs, drawings, sizes and reference numbers are given as an indication only and can be changed without notice. SCS ENVIROBLOCK 50mm Porous Paving

The Concept
SCS ENVIROBLOCK is a key product within a sustainable urban drainage system (SUDS), whereby the porous paving effects the efficient attenuation, infiltration and treatment of stormwater runoff at or near its source - in accordance with current Best Management Practices (BMP’s). It is also an ideal product for grass and gravel reinforcement.

The Product
Made in the EU from recycled high/low density polyethylene SCS ENVIROBLOCK is a modular unit which works in conjunction with its neighbouring units to create an exceptionally durable, permanently porous, high load bearing structure.

Infilled with either grass or natural aggregate in completed form, SCS ENVIROBLOCK remains in harmony with current environmental considerations whilst complying with increased governing legislation.

Design Details - SUDS
Within the concept of porous paving there exists two, more commonly specified, system constructions:

The (patented) Attenuation System
Utilised when direct infiltration is not appropriate and when water storage is required. Figure 1 shows SCS ENVIROBLOCK, containing either grass or natural aggregate, installed on a layer of clean stone overlying an appropriate SCS GT geotextile separation/filtration layer. Beneath this is a voided sub-base which is encased within an appropriate SCS GM Geomembrane.

Collected runoff is discharged via an appropriate SCS storage device (SCS Aquavoid) positioned within or below the sub-base and sealed where it exits the geomembrane storage reservoir.

The Infiltration System
Utilised whenever possible, subject to appropriate soil conditions and environmental considerations. Figure 2 shows SCS ENVIROBLOCK, containing either grass or natural aggregate, installed on a layer of clean stone overlying an appropriate SCS GT geotextile separation/filtration layer. Beneath this is a sub-base which is encapsulated within an appropriate SCS GT geotextile separation/filtration layer.

Collected runoff is allowed to permeate naturally, through the geotextile separation/filtration layer, into the sub-grade obviating the need for a positive discharge facility.

Applications
SCS ENVIROBLOCK is a heavy duty grass and gravel reinforcement system and is therefor ideal for:

- Emergency Access Roads
- Car Parks
- Pedestrian areas
- Grass verges
- Vehicular hard-standings
- Cycle ways
- Helicopter Landing Pads
- Sport & Leisure Facilities
- Holiday Complexes
- Sheltered accommodation
- Domestic driveways
- Caravan sites

SCS INGEGRA 70mm
Porous Paving

The Concept
SCS INTEGRA is a key product within a sustainable urban drainage system (SUDS), whereby the porous paving effects the efficient attenuation, infiltration and treatment of stormwater runoff at or near its source - in accordance with current Best Management Practices (BMP’s). It is also an ideal product for grass and gravel reinforcement.

The Product
Made in the EU from recycled high/low density polyethylene SCS INTEGRA is a modular unit which works in conjunction with its neighbouring units to create an exceptionally durable, permanently porous, high load bearing structure.

Infilled with either grass or natural aggregate in completed form, SCS INTEGRA remains in harmony with current environmental considerations whilst complying with increased governing legislation.

Applications
SCS INTEGRA is a heavy duty grass and gravel reinforcement system and is therefore ideal for:
- Emergency Access Roads
- Car Parks
- Pedestrian areas
- Grass verges
- Vehicular hard-standings
- Cycle ways
- Helicopter Landing Pads
- Sport & Leisure Facilities
- Holiday Complexes
- Sheltered accommodation
- Domestic driveways
- Caravan sites

</table>

The above data indicates typical values - further details of structural and hydraulic properties of the system are available on request.

SUDS - The Principle
SUDS are physical structures built to receive water runoff, being located as close as possible to where the rainwater falls, providing the option of infiltration and attenuation stormwater source control solutions. They also provide treatment for surface water using the natural processes of sedimentation, filtration, absorption and bio-degradation.

Recent research shows that typically up to 80% of sediment; 60% of phosphorous; and 80% of nitrogen can be removed from rainwater through porous paving, together with substantial levels of heavy metals and hydrocarbons. This natural treatment provides the ideal opportunity for rainwater conservation and re-use for a variety of non-potable applications e.g. toilet/urinal flushing, irrigation, laundry, process water, vehicle washing, refrigeration, coolant use, etc.

Such source control principles and techniques are now inherent within best practice and are increasingly becoming the norm within development projects.

Design Details - SUDS
Within the concept of porous paving there exists two, more commonly specified, system constructions:

The Attenuation System
- utilised when direct infiltration is not appropriate and when water storage is required.

Figure 1 shows SCS INTEGRA, containing either grass or natural aggregate, installed on a layer of clean stone overlying an appropriate SCS GT geotextile separation/filtration layer.

Beneath this is a voided sub-base which is encased within an appropriate SCS GM geomembrane.

Collected runoff is discharged via an appropriate SCS storage device (SCS Aquavoid®) positioned within or below the sub-base and sealed where it exits the geomembrane storage reservoir.

The Infiltration System
- utilised whenever possible, subject to appropriate soil conditions and environmental considerations.

Figure 2 shows SCS INTEGRA containing either grass or natural aggregate, installed on a layer of clean stone overlying an appropriate SCS GT geotextile separation/filtration layer.

Beneath this is a sub-base which is encapsulated within an appropriate SCS GT geotextile separation/filtration layer.

Collected runoff is allowed to permeate naturally, through the geotextile separation/filtration layer, into the sub-grade obviating the need for a positive discharge facility.
PAVING SURFACES - INSTALLATION

**Subgrade**
Excavate to formation level as indicated on the drawing, providing a minimal (1: 30 - 1: 100) fall to the drainage system. Compact subgrade, using either a vibrating roller or plate, making good soft spots with suitable material.

**Sub-base for Infiltration Surfaces**
Use granular material (crushed gravel, rock or concrete) as specified - for SUDS schemes this must be free draining. Install the designed depth of sub-base as specified, in 200mm layers compacting each layer (vibratory plate, type DVP 75/22”). Overlay the sub-base with the specified SCS GT 1900 geotextile (essential to prevent migration), overlapping joints by 200mm.

**Bedding Layer**
Lay, screed and compact to a 30mm depth of appropriate bedding layer material (sharp sand or 5mm grit). Selection of the bedding layer material is dependant upon the application. For grass reinforcement mix the bedding layer 4:1 with a good quality top soil to ensure good root growth.

**Wearing Course**
SCS INTEGRA & AGRABLOCK should be laid on a 45 degree face such that each modular unit abuts its neighbouring units, with the triangular locating lugs fitting within the corresponding slots. As laying progresses each unit should be pinned (4 per unit) together with the pins supplied and the specified root zone/grass seed infill material or natural aggregate should be used to infill each cell such that a continuous, permanently porous, high load bearing structure is created.

**Infill Materials (sand and soil mix/aggregate)**
The selected infill material should be specified on a project specific basis based on the application and design, but the following could act as a guide:

**For Sand Bed:** A good quality compacted silica sharp sand should be used, of approximately 30mm thickness after compaction; alternatively a 5mm grit is also suitable if required.

**For Gravel Fill:** Aggregate size should be 5 - 15mm angular gravel and if adjacent to schools should ideally be 10mm single sized crushed rock. The use of an angular gravel rather than a river washed gravel will aid compaction and prevent migration from the units.

**For Grass Fill:** A good quality topsoil should be used to infill the units to the top and allowed to settle (5 - 7 mm); grass seeding followed by a top dressing of a good quality fertiliser should ensure adequate grass growth. Seeded areas must be watered regularly for a period of 6 weeks following installation and traffic kept off the area until grass growth is established.

**Maintenance:** For gravel areas; an occasional sweeping of any overfill back into the units. If gravel appears to be sinking check for the installation of the geotextile.

For grass areas; once grass is established the area can be trafficked and a normal mowing regime resumed. If infill appears to be sinking top up with loam mix and check for presence of geotextile.
TURFSTONE

Turfstone is a ground reinforcement grass paving system ideally suited to projects where a hard surface capable of supporting vehicles is required within a grass area or other space where a naturalistic appearance is preferred. It functions as a SUDS permeable pavement, controlling surface water at source by directing it to the sub-layers.

Turfstone provides a low cost paving option with minimum visual impact. Its honeycombed cavities are designed to facilitate the growth of grass within a supporting concrete matrix, allowing grass to be cut in the conventional manner.

Each element weighs approximately 25kg and so we recommend machine-aided installation to comply with manual handling regulations. Special lifting aids that can be attached to excavators, tele-handlers and cranes are readily available.

Typical uses include:
- Off street residential parking
- Vehicular access for occasional usage, i.e. fire lanes, utility access
- Overspill commercial or retail parking
- Occasional parking for cricket clubs, schools, churches, caravan parks, cemeteries, etc.
- Nature reserves, sensitive heritage sites and country parks
- Environmental erosion control areas, such as riverbanks and waterways
- Road verges
- Field entrances and farm tracks
- SUDS schemes

For installation guidelines please go online or contact the Tobermore Sales Office.

KILLESHAL PRECAST CONCRETE ARE PLEASED TO OFFER A VERY COMPETITIVE PRICED POLYPROPYLENE ALTERNATIVE IN LINE DRAINAGE CHANNELS AND GRATINGS

**Polypropylene Channel**

- **Length:** 1000m
- **Overall Width:** 130mm
- **Overall Height:** 110mm
- **Internal Width:** 100mm
- **Inernal Height:** 90mm
- **Weight:** 1200g

**Polypropylene Grating**

- **Length:** 1000m
- **Overall Width:** 130mm
- **Overall Height:** 110mm
- **Internal Width:** 100mm
- **Inernal Height:** 90mm
- **Weight:** 1200g

**Load Class**

- A15

---

Please read the following instructions thoroughly before proceeding with the installation of your system.

**Fig. 1**

Prepare a trench of sufficient depth. To ensure reliable drainage into the channel, the finished ground surface level, including paving, should be 2 - 3 mm higher than the upper edge of the grating. Use a stretched line to assist accurate windmills. Fill in with an even bed of good quality concrete 80 - 100mm depth.

**Fig. 2**

Before installation, tap out the pre-formed outlet on the channel unit as required.

**Fig. 3**

Assemble, interlock and align channels on the concrete bed and either connect to the underground drainage or soak away. Ensure gratings are placed in channels during installation. Protect the grating’s finish at this stage by placing them upside down in the channels during installation.

**Fig. 4**

When the channels are in position fill the trench either side of the channel with good quality concrete 80 - 100mm width. Ensure correct depth of concrete so that finished ground surface level, including paving, is 2 - 3mm higher than the top of the grating.

**Fig. 5**

Pave slab grating

Once the concrete has set, remove the gratings and place back into the channels the right way up, firmly tapping to ensure grating hugs properly locate into slots on channel. Locking bars can be supplied as an optional extra with metal gratings that locate into slots in the channel wall.

Standard benches illustrated below can be produced in fair faced precast concrete with an optional exposed aggregate finish, or in reconstituted cast stone with an acid etched finish. Sockets for accurate fixing of timber slats may also be provided on request. An extremely versatile and hard wearing option, these seats are of a manageable size for the purposes of delivery, off-loading and movement around site.

Please Note: We are happy, as always, to quote for bespoke requirements.

KPC are pleased to offer StoneWrap, one of the most innovative and increasingly popular cladding/veneer systems in Europe. StoneWrap Manufactured Stone has several advantages over natural stone, it is lighter and easier to work with than natural stone and it comes in a wide range of finishes and colours to suit any location, interior or exterior. We have a number of different stone ranges for internal and external applications.

Stone is a beautiful material, and so much a natural part of our environment that it never looks out of place. But while stone can be expensive and difficult to work with, StoneWrap manufactured stone is not. Now you will be amazed at how easy it is to add the beauty, elegance and durability of stone to your property with StoneWrap Cladding from KPC.

We have Stone Wrap in a style and colour to suit every requirement.
If you’re unsure about how best to match the right style and colour for your requirements just call our experienced staff and they will be happy to advise.

Stonewrap Manufactured Stone, from KPC is a fantastic product that combines the best qualities of a modern easy to use material with those sought-after qualities of natural stone. Stonewrap is pre-formed into shapes, including corner pieces, that are easy to work with, requiring little or no alteration before fitting in place and its lightweight nature means it can be added to existing buildings without the need for additional support or enhancement to foundations.
